

Solar Heating

Item Description

Code No.

Solar Controllers

13001

Single Power Outlet

13002

Double Power Outlet

Standard Solar Controller

(a) Single Power Outlet

Turns solar pump on when sufficient heat is available at the solar collector. Calibrated knob, Auto/Manual touch button operates manual override function.

13003

Single Power Outlet

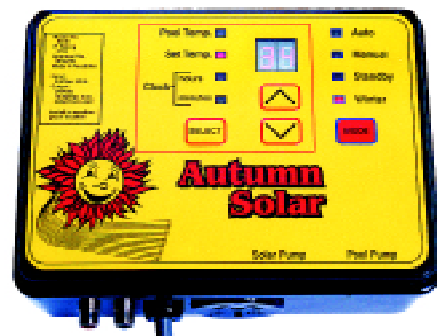

13004

Double Power Outlet

The Digital Solar Controller

(a) Single Power Outlet

Turns solar pump on when sufficient heat is available at the solar collector. LED displays actual pool temperature. To adjust pool temperature simply turn the control knob and the LED will momentarily display the selected temperature. Auto/Manual touch button operates manual override function.

130011

Single Power Outlet

130012

Double Power Outlet

The Electronic Solar Controller with WINTER mode

Features "Smart Electronics" that switch your system on every hour between 8am and 6pm to test water temperatures. Winter mode setting keeps the solar system and pump in first class condition by running the solar pump periodically. LED displays pool temperature and solar heated water temperature. Electronic clock with battery back-up memory retention. Touch button control of all functions.

All Models

Each model is available with either a Single Power Outlet for separate solar systems or a Double Power Outlet for boosted solar systems. All controllers have simple plug-in temperature sensors and come with a stainless steel mounting bracket and hardware for easy installation.

13005

Lead for roof temperature sensor

13006

Bulk lead for roof temperature

13007

Pool water temperature sensor for solar controller

13008

Roof temperature hot sensor for solar controller
