

“ My entire family was blown away by how well Solar-Breeze NX works! The difference is not just night and day...it is light years ahead of anything we've ever seen or tried!!! Within 30 minutes, our pool was crystal clear! No joke!!! And it keeps on cleaning and can literally run all day and night even at 2-3 am well past dusk.

Dennis P.

Robotic Debris Collection

Removes dirt and debris from the surface before it sinks & produces bacteria

No Grid Energy Here

Solar-Breeze NX is fully solar powered

Distributes Sanitizer

Built-in chemical dispenser sanitizes water uniformly

The Solar-Breeze NX revolutionizes pool cleaning in a smart, simple and sustainable way. Pools collect leaves, dust, pollen and other debris all day long. Debris typically floats for 3-4 hours before it decays and sinks to the bottom. By then, it has already produced the bacteria that feeds the growth of algae in your pool. So why wait for all that debris to sink?

Solar-Breeze NX | Robotic Pool Skimmer

The Solar-Breeze NX from Solar Pool Technologies, Inc. is a whole new concept in pool cleaning that is helping pool owners save time, energy and money. Most pool cleaning systems are designed to clean the pool from the bottom after organic material, debris and dust have become water logged and sink.

Most of the material that ends up on the bottom of the pool floats on the surface for up to 3 hours before it sinks. If this debris was removed from the surface, less material would collect on the bottom of the pool and bottom cleaning systems would not have to run as often. In addition, less bacteria would grow and accumulate in the pool since the organic material is being removed before it has a chance to decay in the sunlight.

Technical Information

| | |
|----------------------------------|--|
| Product Name: | Solar-Breeze NX |
| Description: | Solar-powered intelligent robotic pool skimmer |
| Power Source: | Two (2) 6-Watt (combined 12W) photovoltaic solar panels |
| Power Storage: | One (1) water-proofed 5300 mAh Lithium Ion battery |
| Propulsion Method: | ABS/Polycarbonate blend paddle wheels |
| Propulsion source: | Brushless DC low-current electric motors |
| Control system: | Water-proofed printed circuit board and firmware |
| Body & other plastic components: | Customize UV protected polypropylene and glass fiber blend |
| Filter mesh: | High strength polyester |
| Lights: | Low-current LED |
| On/Off Mechanism: | Magnetic |
| Box Dim & Weight | 66 x 58.4 x 22.9 cm : 6.4 kg |
| Freight Weight & Qty | 32 Units : 225 kg (incl. of pallet) |

How it Works

The Solar-Breeze NX is an intelligent, solar-powered, robotic swimming pool surface skimmer, combined with a swimming pool Chemical Dispenser. It operates on solar power and on internal storage batteries charged by the sun during the day. Therefore, it requires no cords, hoses or electrical connections. Simply place it in your pool, turn the switch to the "ON" position and watch Solar-Breeze NX clean your pool for free using only energy from the sun. It's an ideal pool-skimming solution for both inground and above ground pools.
